A MODEL OF INFORMATION SYSTEM
FOR A TRANSPORTATION COMPANY

Adam Przybyłek, Michał Sujkowski

Abstract: In the age of the New Economy ability to react to the market changes leads to the business success or failure. Many organizations use Information Technology to improve theirs business. A proper Information System provides relevant information to speed up decision-making. The purpose of this paper is to propose a model of Information System, which supports the selected business processes in the examined transportation company. Structured analysis and design techniques were used to develop the model.
